Voluson 730Expert/Pro DICOM Conformance Statement
105952 Rev. 0
0 Introduction

This document describes the Kretztechnik Voluson 730 Expert/Pro Ultrasound System’s conformance to the ACR-NEMA DICOM (Digital Imaging and Communications in Medicine) standard and satisfies the DICOM requirement for a vendor conformance specification.

The Voluson 730 Expert/Pro system is an ultrasound imaging device. The SonoView option of the Voluson 730 Expert/Pro system provides a means to select images and send them via DICOM to storage servers and printers.

0.1 DICOM Background

The DICOM information exchange specification provides a definitive structure of commands and information that allow for the intercommunication of medical imaging devices. Developed by the American College of Radiology (ACR) and the National Electrical Manufacturers Association (NEMA), the DICOM standard strives to promote communication of image information through the use of a standardized set of command classes and information semantics.

The DICOM standard defines classes of information that are common to many modalities of medical imaging. However, to meet the specific needs of information content for such a diverse range of information, the DICOM specification defines structures for a multitude of medical data. To alleviate the need for applications to implement every aspect of the DICOM specification, a list of conformance tables for every modality was created to define the minimum set of information necessary for data exchanges. A requirement of the DICOM specification is to maintain a compliance document that outlines a subset of DICOM services and data classes that are supported by an application. The purpose of this document is to define a subset of DICOM for the exchange of information with the Kretztechnik Voluson 730 via its SonoView feature.

This document is written with respect to the ACR-NEMA Digital Imaging and Communications in Medicine (DICOM) version number 3.0. For complete definitions of terms and acronyms in this document, please refer to the Digital Imaging and Communications in Medicine (DICOM) Standard.
1 Implementation Model

The Voluson 730 SonoView feature incorporates the DICOM 3.0 standard for networked image printing and image store functions. Images are transferred from the Voluson 730 ultrasound system using standard network connections to be processed on a centralized printer or stored on a DICOM compliant file server.

1.1 Application Data Flow Diagram

The diagram below represents the SonoView’s Application Entities (AE) (in the boxes) and depicts the relationship of the Application Entity’s use of DICOM to invoke real-world activities (shown on the right side).

There are two local real-world activities that occur in the Voluson 730 system – Image Send and Image Print. When a user changes operation mode to image filing system from a live scanning session, the system will provide the menu to send images to a network archiving server or print images to a DICOM compliant printer.

Figure 1.1-1 Implementation Model
1.2 Functional Definitions of AE's

Printing AE
This AE handles all aspects of the Print Management SCU.

Storing AE
This AE handles sending ultrasound images to a storage server using the DICOM Store SCU Services. In addition, screen capture images can be sent using Secondary Capture SOP class.

Worklist AE
This AE supports the DICOM Basic Worklist Management Service as an SCU.

1.3 Sequencing of Real-world Activities

In order for any of the remote processes to be able to provide the Real World Activity SCP services which the Voluson 730 system, an SCU, has requested, the appropriate association must have been previously opened. This initiation occurs with the “Send” command in SonoView image store operations or “Print” in SonoView for image print operations. In addition Send and Print requests can also be queued (using ‘Direct Send’ and ‘Direct Print’). In this case the queue manager will open an association and transfer the images in the background.

There are no other sequencing requirements.
2 AE Specifications

2.1 Printing AE - Specification

The Printing AE provides conformance to the following DICOM SOP Classes as an SCU:

<table>
<thead>
<tr>
<th>SOP Class Name</th>
<th>SOP Class UID</th>
<th>Conformance Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic Grayscale Print Management Meta SOP Class</td>
<td>1.2.840.10008.5.1.1.9</td>
<td>Standard</td>
</tr>
<tr>
<td>Basic Color Print Management Meta SOP Class</td>
<td>1.2.840.10008.5.1.1.18</td>
<td>Standard</td>
</tr>
<tr>
<td>Basic Film Session SOP Class</td>
<td>1.2.840.10008.5.1.1.1</td>
<td>Standard</td>
</tr>
<tr>
<td>Basic Film Box SOP Class</td>
<td>1.2.840.10008.5.1.1.2</td>
<td>Standard</td>
</tr>
<tr>
<td>Basic Gray Image Box SOP Class</td>
<td>1.2.840.10008.5.1.1.4</td>
<td>Standard</td>
</tr>
<tr>
<td>Basic Color Image Box SOP Class</td>
<td>1.2.840.10008.5.1.1.4.1</td>
<td>Standard</td>
</tr>
<tr>
<td>Printer SOP Class</td>
<td>1.2.840.10008.5.1.1.16</td>
<td>Standard</td>
</tr>
</tbody>
</table>

Association Establishment Policies

The Printing AE will initiate an association when the user invokes the “Print” command in SonoView.

2.1.1.1 General

Maximum PDU size offered: 28,672 bytes

Minimum PDU size accepted: 1,024 bytes

Number of Associations

The maximum number of simultaneous associations for the Printing AE is 2.

2.1.1.2 Asynchronous Nature

The Printing AE will not use asynchronous operations window negotiation.

2.1.1.3 Implementation Identifying Information

Implementation Class UID: “1.2.276.0.26.20010718.240”

Implementation Version name: “KRETZDICOM_240”

Notes: Version name above will be used initially but is subject to change with versions.

Association Initiation by Real-world Activity

The Printing AE will open associations to the Print Server when the real-world activity occurs corresponding to the user invocation of “Print” command in SonoView. All images in the selected exams from SonoView will be sent to the Print Server. After all images are printed, the association will be closed.

2.1.1.4 Association Initiation by: “Print” in SonoView

The user invocation of “Print” in SonoView will cause an association to be initiated to Print Server.

2.1.1.4.1 Proposed Presentation Context to a Gray Print Server

Voluson 730Expert/Pro DICOM Conformance Statement
105952 Rev. 0
### 2.1.1.4.1.1 SOP Specific Conformance to Verification SOP Class

The Printing AE does not use the Verification SOP Class as an SCU.

### 2.1.1.4.1.2 SOP Specific Conformance to Basic Gray Print Management Meta SOP Class

The Printing AE provides Standard Conformance to the Basic Gray Print Management Meta SOP Class as an SCU. This implies standard conformance for the

- Basic Film Session SOP Class,
- Basic Film Box SOP Class,
- Basic Grayscale Image Box SOP Class,
- Printer SOP Class.

Each of these SOP classes is described in the paragraphs to follow.

#### 2.1.1.4.1.2.1 SOP Specific Conformance to Basic Film Session SOP Class

2.1.1.4.2.1 SOP Specific Conformance to Verification SOP Class

The Printing AE does not use the Verification SOP Class as an SCU.

2.1.1.4.2.2 SOP Specific Conformance to Basic Color Print Management Meta SOP Class

The Printing AE provides Standard Conformance to the Basic Color Print Management Meta SOP Class as an SCU. This implies standard conformance for the following SOP classes:

Basic Film Session SOP Class
Basic Film Box SOP Class
Basic Color Image Box SOP Class
Printer SOP Class
Similarly, the Basic Grayscale Print Management Met SOP Class uses:

- Basic Film Session SOP Class
- Basic Film Box SOP Class
- Basic Grayscale Image Box SOP Class
- Printer SOP Class

The SOP classes are described in the sections to follow.

### 2.1.1.4.2.3 SOP Specific Conformance to Basic Color Image Box SOP Class

2.2 Storing AE - Specification

The Storing AE provides conformance to the following DICOM SOP Classes as an SCU:

<table>
<thead>
<tr>
<th>SOP Class Name</th>
<th>SOP Class UID</th>
<th>Conformance Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ultrasound Image Storage SOP Class</td>
<td>1.2.840.10008.5.1.4.1.1.6.1</td>
<td>Standard Extended</td>
</tr>
<tr>
<td>Ultrasound Multi-frame Image Storage</td>
<td>1.2.840.10008.5.1.4.1.1.3.1</td>
<td>Standard Extended</td>
</tr>
<tr>
<td>Secondary Capture Image Storage</td>
<td>1.2.840.10008.5.1.4.1.1.7</td>
<td>Standard Extended</td>
</tr>
</tbody>
</table>

Association Establishment Policies

The Storing AE will open an association when the user invokes the “Send” command.

2.2.1.1 General

Maximum PDU size offered:  28,672 bytes
Minimum PDU size accepted:  1,024 bytes

2.2.1.2 Number of Associations

The maximum number of simultaneous associations for the Storing AE is 4.

Note that the other Application Entities in this device may also be simultaneous active.

2.2.1.3 Asynchronous Nature

The Storing AE will not use asynchronous operations window negotiation.

2.2.1.4 Implementation Identifying Information

Implementation Class UID:   "1.2.276.0.26.20010718.240"
Implementation Version name: " KRETZDICOM_240"
Notes: “ Version name above will be used initially but is subject to change with versions.

Association Initiation by Real-world Activity

The Storing AE will open associations to the Storage Server when the real-world activity occurs corresponding to the user invocation of “Send” command in SonoView. All images in Selected exams from SonoView will be sent to the Storage Server. After all images are transferred, the association will be closed.

In ‘Direct Send’ mode the Storing AE will queue the current image for transfer. The queue manager will then open an association to the Storage Server and send the images in background.

2.2.1.5 Association Initiation by: “Send” in SonoView or by Direct Send

The user invocation of “Send” in SonoView will cause an association to be initiated.
If there are queued ‘Direct Send’ transfers pending an association will be initiated as well. In this case the transfers will be done in the background.

2.2.1.5.1 Proposed Presentation Context to a Storage Server

Storing AE Proposed Presentation Contexts to a Storage Server

<table>
<thead>
<tr>
<th>Presentation Context Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
</tr>
<tr>
<td>Ultrasound Image</td>
</tr>
<tr>
<td>Ultrasound Image (using JPEG)</td>
</tr>
<tr>
<td>Ultrasound Image (using lossless JPEG)</td>

</tr>
<tr>
<td>Secondary Capture</td>
</tr>
<tr>
<td>Secondary Capture (using JPEG)</td>
</tr>
<tr>
<td>Secondary Capture (using lossless JPEG)</td>
</tr>
</tbody>
</table>

NOTE: For each storage server it is possible to enable or disable the usage of JPEG transfer syntax independently. If JPEG is enabled the compression factor can be set to a value between 80% and 100%. If the compression factor is set to 100% then the JPEG Lossless transfer syntax will be used.

2.2.1.5.1.1 SOP Specific Conformance to Verification SOP Class

The Storing AE dose not use the Verification SOP Class as an SCU.

2.2.1.5.1.2 SOP Specific Conformance Statement to the Ultrasound, the US Multiframe and the Secondary Capture Storage SOP Class.

The Ultrasound Image Storage SOP uses the Ultrasound Image IOD Modules as follows:

<table>
<thead>
<tr>
<th>Ultrasound Image Storage Modules Used</th>
</tr>
</thead>
<tbody>
<tr>
<td>Module</td>
</tr>
<tr>
<td>Patient</td>

The Secondary Capture Storage SOP uses the SC Image IOD Modules as follows:

### Secondary Capture Storage Modules Used

<table>
<thead>
<tr>
<th>Module</th>
<th>Usage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Patient</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>General Study</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>Patient Study</td>
<td>U</td>
<td>Used</td>
</tr>
<tr>
<td>General Series</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>General Equipment</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>SC Equipment</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>General Image</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>Image Pixel</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>SC Image</td>
<td>M</td>
<td>Used</td>
</tr>
<tr>
<td>Overlay Plane</td>
<td>U</td>
<td>Not used</td>
</tr>
<tr>
<td>Modality LUT</td>

<tr>
<td>SOP Common</td>
<td>M</td>
<td>Used</td>
</tr>
</tbody>
</table>
Each module which is used by the Storing AE has a table below which indicates the elements supported.

### Patient Module Elements

<table>
<thead>
<tr>
<th>Name</th>
<th>Use</th>
<th>Tag</th>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Patient's Name</td>
<td>2</td>
<td>0010, 0010</td>
<td>xx</td>
<td>Patient name with ^ delimiters</td>
</tr>
<tr>
<td>Patient ID</td>
<td>2</td>
<td>0010, 0020</td>
<td>xx</td>
<td>64 char max</td>
</tr>
<tr>
<td>Birth Date</td>
<td>2</td>
<td>0010, 0030</td>
<td>xx</td>
<td>Used</td>
</tr>
<tr>
<td>Patient Sex</td>
<td>2</td>
<td>0010, 0040</td>
<td>xx</td>
<td>Used</td>
</tr>
<tr>
<td>Referenced Patient Sequence</td>
<td>3</td>
<td></td>
<td></td>
<td>Not used</td>

2.3 Worklist AE - Specification

The Worklist AE provides conformance to the following DICOM SOP Classes as an SCU:

<table>
<thead>
<tr>
<th>SOP Class Name</th>
<th>SOP Class UID</th>
<th>Conformance Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Modality Worklist Information Model - FIND</td>
<td>1.2.840.10008.5.1.4.31</td>
<td>Standard Extended</td>
</tr>
</tbody>
</table>

Association Establishment Policies

The Worklist AE will initiate an association when the user invokes the Search command.

2.3.1.1 General

Maximum PDU size offered: 28,672 bytes

Minimum PDU size accepted: 1,024 bytes

2.3.1.2 Number of Associations

Maximum number of simultaneous associations: 1

2.3.1.3 Asynchronous Nature

The Worklist AE will not use asynchronous operations window negotiation.
2.3.1.4 Implementation Identifying Information
Implementation Class UID:  "1.2.276.0.26.20010718.240"
Implementation Version name:  "KRETZDICOM_240"
Notes: Version name above will be used initially but is subject to change with versions.

**Association Initiation by Real-world Activity**
The Worklist AE will open association to the Worklist Server when the real-world activity occurs corresponding to the user invocation of Search. The association is closed at completion of the query.

2.3.1.5 Association Initiation by:  “Search”
The user invocation of “Search” will cause an association to be initiated to a Worklist server.

2.3.1.5.1 Proposed Presentation Context to an Worklist Server

Worklist AE Proposed Presentation Contexts to a Worklist Server

<table>
<thead>

3 Communication Profiles

3.1 TCP/IP Stack Supported

The TCP/IP protocol is used. The port address is configurable as stated elsewhere in the spec DCS.

Physical Media Supported

Standard IEEE 802 (Ethernet) 10BaseT (twisted pair), 10Base2 (thin coax) and 10BaseFL (Fiber Optic Link) are supported. Destination Ethernet address shall be acquired using the Address Resolution Protocol (ARP). Internet Protocol (IP) address shall be acquired manually and pre-loaded into the device.

4 Extensions/Specializations/Privatizations

4.1 Standard Extended/Specialized/Private SOPs

None
4.2 Private Transfer Syntaxes
None.

5 Configuration
This device obtains configuration information at the time of installation to provide the following.

- mapping from Application Entity Title to Presentation Address
- device configuration information

5.1 AE Title/Presentation Address Mapping
The translation from AE Title to Presentation Address is to be performed using a lookup table loaded at installation or some other time.

5.2 Configurable Parameters
A lookup table contains the following configuration parameters.

- Application Entity Title
- IP Address
- Port number

6 Support of Extended Character Sets
Extended character sets are not supported.
